Objective

Enthusiastic Data Engineer with hands-on experience gained through the ITI Data Engineering professional training. Proficient in Data Integration, Data Modeling, Extract Transform Load (ETL), Data Warehousing (DWH), and Big Data technologies. Skilled in Python, SQL, and tools like SSIS, Spark, and Kafka, with a solid foundation in designing and implementing efficient data pipelines.

Education

Bachelor's Degree in Computers and Artificial Intelligence, **Benha University** (2018 – 2022)

Graduation Project: Web application for diagnosing diseases using AI algorithms (Python, Machine Learning, DL)

Training Diploma

Data Engineering

May 2024 – September 2024

Intensive Code Camp (ITI), Information Technology Institute , (MCIT) Ministry Of Communications And Information Technology, Data engineering track, Menofia branch

- Built end-to-end ETL pipelines using SSIS and Talend to automate data extraction, transformation, and loading processes across diverse data sources.
- Managed workflow scheduling using Airflow, ensuring smooth data movement across various stages of the pipeline.
- Worked with AWS services like S3 to store and manage data.
- Big Data & Streaming, utilized Kafka to handle real-time data streams, creating efficient data ingestion pipelines.
- Leveraged Spark for processing large datasets, optimizing query performance, and ensuring scalability for distributed systems.

Data Science Diploma | Space Code Academy

September 2021 – March 2022

Learned Python for data analysis, machine learning, and visualization,
Gained expertise in SQL, database design, and exploring deep learning concepts.

Technical skills

- **Programming & Scripting:** Python, SQL, Bash scripting
- **Data Engineering & Integration:** Data Warehousing (DWH), ETL (Extract, Transform, Load), Data Modeling, Data Integration, SSIS, Talend.
- **Big Data & Streaming:** Apache Spark, Kafka.
- **Databases:** SQL, NoSQL, MongoDB.
- **Cloud & Orchestration:** AWS services, Apache Airflow, Jenkins (CI/CD).
- **Operating Systems:** Linux.
- **Containerization & Automation:** Docker.
- **Web Scraping:** Selenium.
- **Others:** Machine Learning, Deep Learning, Image Processing, Data Exploration, Visualization (Power BI)

Certificates

Fundamentals of the Databricks Lakehouse Platform Accreditation Databricks	September 2024
Apache Spark Beginners Course Simplilearn	August 2024
AWS Academy Cloud Foundations Aws Academy	July 2024

Projects

- Real-Time Churn Prediction Pipeline for Bank Clients**

Built a real-time data pipeline using Python, Kafka, and Spark to predict customer churn, with results stored in Amazon S3 and visualized in Power BI. Automated with Airflow and deployed via Docker.
- Global terrorism EDA**

An open-source database including information on terrorist attacks around the world from 1970 through 2017. Make EDA and finding the insights derived from the data. Using python libraries (pandas – seaborn – matplotlib – plotly – dask).
- Gravity Books ETL Project**

This project focuses on extracting data from an OLTP database of an online book store and transforming it into a data warehouse (DWH). The ETL process was implemented using SQL Server Integration Services (SSIS), and the data warehouse is structured using a Galaxy schema with facts and dimensions tables.
- COVID-19 Data Analysis with PySpark**

In this project, we preprocess COVID-19 data using PySpark, handle missing values, perform data analysis, and extract valuable insights. The focus is on data cleaning, feature engineering, and SQL-based querying for in-depth analysis.

Personal skills

- Effective Communication and Presentation Skills
- Team work and collaboration.
- Attention to Detail
- Strong Analytical and Problem-Solving Skills

LANGUAGES

- Arabic (native)
- English (very good)
