

Tasneem Samy

Data Engineer

Alexandria | (+20) 1065048172 | tasneemsami24@gmail.com | <https://github.com/neema233>

PROFILE

Motivated Data Engineer with hands-on experience gained through my internship at the Information Technology Institute where I developed core data engineering skills, including SQL, Python, and ETL processes. Proficient in data warehousing, data modeling, and big data technologies including Hadoop, Spark, Kafka. Adept at working with Docker, Git and Bash scripting. Familiar with AWS.

INTERSHIPS

Information Technology Institute (ITI).

(May 2024- August 2024)

Track: Data Engineering

Data Engineering Zoomcamp.

(January 2024 -April 2024)

Topics: Data warehouse, Workflow orchestration, GCP, Docker, Batch Processing, Streaming Processing.

EDUCATION

Bachelor of Engineering, Electronics and Communication department. (July 2023)

Alexandria University.

Grade: 84.5% Very Good H

TECHNICAL SKILLS

Programming & Scripting Languages: Python, SQL, Shell scripting

Data Engineering Technologies: Data Warehouse, Data Modeling, ETL, SSIS, Talend

Big Data Technologies: Apache Spark, Apache Hadoop, Apache Kafka, Apache Hive

Containerization: Docker

Version Control: Git, Github

Orchestration tools: Apache Airflow, Familiar with Mage.ai

Cloud Services: AWS (Aim, EC2, IAM, VPC, S3, Lambda)

BI Tools: Power Bi

PROJECTS

[Churn Customer End-to-End Pipeline \(Apache Kafka, Airflow, Spark, Hadoop, Hive, AWS, SQL Server, Azure SQL Database, Docker, Power BI\) \[Graduation Project\]](#)

Developed a scalable multi-cloud data pipeline for real-time ingestion, processing, and machine learning analytics, showcasing effective data management and visualization capabilities.

[Real Time Kafka Spark Streaming \(Kafka, Spark, HDFS, Docker\)](#)

Kafka system for streaming server metrics and load balancer logs, with data processing using Spark and storage in a relational database and Hadoop.

[E-commerce Data Warehouse \(SQL, Excel, ETL, SSIS, Power Bi\)](#)

Built and implemented an e-commerce data warehouse (SQL Server) using ETL processes (SQL and SSIS) to transform and load data Visualized insights with Power BI.

[Analyzing Large Files with Pyspark \(Spark, HDFS, Docker\)](#)

Developed a PySpark application within a Dockerized environment to analyze a TMDB movie dataset (5,000+ entries). Leveraged pre-aggregation techniques to efficiently generate reports on movie genres.

[ETL Pipeline for Green Taxi Data in Mage.ai \(ETL, workflow orchestration, pandas, SQL\)](#)

This project demonstrates the construction of an ETL pipeline using Mage.ai which is a workflow orchestration platform, to process green taxi trip data for the final quarter of 2020.

COURSES & CERTIFICATES

- **Advanced SQL For Data Engineering** (*from Data Science 365*).
- **AWS Cloud Foundations** (*from AWS Academy*)
- **Fundamentals Of Databricks Lakehouse** (*from Databricks*)

LANGUAGES:

:

- **Arabic (Native)**
- **English (Professional)**
